

Enterprises need to automate a complex and diverse landscape of applications, platforms and technologies to deliver services in a competitive digital business environment. Digital Business Automation is essential to succeed and scale your IT operations:

- You have to manage complex workload across platforms, ERP systems, business apps from mainframe to microservices and the cloud. Automating manual steps within business processing and integrating workflow tasks across agile and traditional teams.
- You need to simplify automation for your big data, enabling self-services for data scientists while providing massive scale and stronger governance on data flows.
- You also require self-services available for Dev and Business users to increase the quality of service, reduce the number of service-desk tickets and integrate with your service catalogue.

Automatic Automation gives you the agility, speed and reliability required for effective Digital Business Automation. From a single unified platform, Automatic centrally delivers the Workload Automation, Self-Service Automation, and Big Data Automation capabilities needed to drive growth of your company and accelerate your digital transformation.
